

## Absorbent® GP™ Pads

### All Purpose Cellulose Pads / Rolls

**GP Pads** were engineered to fill a gap where paper towels are too lightweight or ineffective, and where polypropylene pads may have usage, environmental or disposal issues. **GP Pads** have a high absorption rate of over 10 times their weight for spill cleanup. They are also soft and flexible and work as heavy-duty wipes when cleaning soiled surfaces. The pads come in sheet and roll form and make excellent machine shop countertop blotters to place machine parts on for repair.

#### Background Information

- **GP Pads** are produced from cellulose fiber.
- **GP Pads** have a high absorption rate of over 10 times.
- **GP Pads** are designed to be delaminated into individual sheets and can be used for individual wipes.
- **GP Pads** are soft and flexible ideal for cleaning irregular surfaces such as oily-equipment parts.
- **GP Pads** are burnable without the toxic byproducts of polypropylene.

#### Applications

- **Active Dry Land Spill cleanup**  
Use for pick up and solidification of oil, fuel, antifreeze and other liquid spills.
- **High Heat Usage**  
Use around hot equipment where polypropylene products may melt.
- **Cold Weather Applications**  
Use in extreme cold where polypropylene products lose effectiveness.

- ***Specialized Production Plants***  
**Use in process plants such as paper mills where plastics are forbidden on site due to possible fiber or process contamination.**
  
- ***Maintenance Shops***
  - **Use as countertop blotters when rebuilding equipment parts like gearboxes.**
  - **Use to handle and wipe clean oil-soiled equipment parts.**
  - **Use to catch splashes and spills when working on hydraulics.**
  - **Use to catch leaking oil during oil filter changes on vehicles and equipment.**
